

Syed Abdul Muqeet Mujeeb – AI Engineer

a.muqeetmujeeb@gmail.com | +91 9010830602 | github.com/MujeetMujeeb | linkedin.com/in/mujeetmujeeb | Hyderabad

Personal Summary

AI Engineer with experience building scalable, modular systems and end-to-end backend pipelines. Worked on applying LLMs, NLP and Generative AI to production-oriented projects and voice AI Agents. Experience includes vector search, REST/WebSocket APIs, and containerized cloud deployments, with a focus on reliability and maintainable architecture.

Industry Experience

AI Developer

SMARTnCODE Technologies

December 2025 – Present
(On-site) Hyderabad, India

- Built a full-stack AI legal chatbot from scratch with a RAG pipeline (Pinecone + BGE-Large + Gemini API), achieving **85% response accuracy** and **<3s latency** on domain-specific legal queries.
- Engineered a rolling 10-message summarization strategy, reducing token consumption by **~40%** while preserving full conversational context across long sessions.
- Delivered multi-modal input support — document upload via OCR and speech-to-text via Whisper — served through a FastAPI backend with Redis session management and SQL Server storage.
- Developed a real-time conversational avatar system using SoulX-Flashhead deployed on RunPod cloud GPU with WebRTC sessions, achieving **~2s end-to-end response latency** in live interactions.
- Integrated Gemini STS as the avatar's conversational brain; resolved audio-visual sync conflicts and designed a scalable multi-user session and database layer.
- Contributing to R&D on an AI video generation platform, evaluating and integrating diffusion-based models (Google Veo, Kling AI, Seedance) into a unified cinematic content creation pipeline.

Project Experience

MindCanvas (Supabase, LangChain, Cytoscape.js, FastAPI, React, OpenAI)

- Built an AI knowledge system converting browsing data into clustered knowledge graphs paired with a **RAG-based learning assistant**, with interactive nodes to explore details and relationships, enhancing learning retention.
- Achieved 3x faster retrieval and a **75% improvement** in identifying latent relationships across datasets.
- Developed a full-stack application and Chrome extension for AI-powered content analysis and visualization.

HireSense (Next.js, Supabase, PostgreSQL, GPT-4, Groq API, ElevenLabs)

- Built an AI hiring platform that automated cross-validation of CVs, LinkedIn, and GitHub data, reducing candidate verification time by **60%**.
- Designed a GPT-4-powered Certainty Score using sentiment analysis to quantify candidate credibility; integrated AI-driven empathetic interviews via ElevenLabs and Groq for behavioral insights.

Education

B.E. Computer Science (Artificial Intelligence & Machine Learning)

Lords Institute of Engineering & Technology

GPA: 8.5
Nov 2022 – July 2026

Skills

Languages/Backend	Python, SQL, Git, FastAPI
AI/ML	LLMs, LangChain, OpenCV, Transformers, PyTorch, TensorFlow, Scikit-learn, Pandas
Infra/Data	Docker, AWS, RunPod, PostgreSQL, SQL Server, Redis, Supabase, Qdrant, Pinecone
Voice/Realtime	WebRTC, WebSockets, STT/TTS, Gemini STS

Achievements

- Competed in **6+ hackathons**, building AI-driven solutions under real-world time constraints.
- Active LeetCode problem solver — consistently practising data structures and algorithms.
